EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Russell Tarleton on May 11, 2005.

The application has been amended as follows:

IN THE CLAIMS:

Claim 5 change the dependency from "3" to --1--;

Claim 8 change the dependency from "3" to --1--.

DETAILED ACTION

Remarks

2. Claims 3-4, 6-7, 9, 19, 21-22, 24, 26, 28-29, and 31-32 were canceled, and new claims 33-56 were added.

Allowable Subject Matter

3. Claims 1-2, 5, 8, 10-18, 20, 23, 25, 27, 30, and 33-56 are allowed.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

The closest prior art issued to Sezan fails to teach or suggest a Hierarchical Summary Scheme DS and its corresponding method of “a Hierarchicalsummary Description Scheme (DS) for describing a video summary, the Hierarchicalsummary DS comprising a Highlightlevel DS that comprises at least one Highlightsegment DS, the Highlightsegment DS configured to describe information on a highlight segment corresponding to one of a plurality of video summary intervals, the Highlightsegment DS further comprising a VideosegmentLocator DS describing time information or a video itself of the highlight segment and an ImageLocator DS describing a representative frame of the highlight segment” as cited in claims 1, 17, 18, and a system, an apparatus and its corresponding method for generating video summary description data according to a video summary description scheme as cited in claims 25, 44, 47, and 51.

Sezan et al. describe general ideas for providing description schemes in terms of user, system, and program. Sezan describes the possibility that each description scheme or a combination thereof in the three aspects can make the user search, browse, and filter programs in a personalized manner. As described therein, Sezan discloses a highlight view DS and Key frame DS together with a thumbnail view, event view, close-up view, and an alternative view DS under a visualization view DS, which is illustrated in Figure 14, yet such various views are all independent of each other because each DS view is made for its own viewing purpose. In other words, each DS view lacks the intrinsic interrelationship among the other DS views. Sezan's invention is aiming to a different approach than the present invention does.
